Manufacturer's Declaration per sub-clause 4.2.5 of IECEE	02:
The application for obtaining a CB Test Certificate	⊠Yes
includes more than one factory location and a	□ Not applicable
declaration from the Manufacturer stating that the	5 1 4
sample(s) submitted for evaluation is (are)	× 4 5 5
representative of the products from each factory has been	S & H X
provided:	
When differences exist; they shall be identified in the Gene	ral product information section.
Name and address of factory (ies):	OpenVox Communication Co., Ltd.
E LE LE	Room 201, Building I, Jinchangda, Building 00082, Sh angwei Industrial Zone, Zhangkengjing Community, G uanhu Street, Longhua District, Shenzhen, Guangdong, China
GENERAL PRODUCT INFORMATION:	A H H
Product Description:	K K K
The equipment under test (EUT) is a Fingerprint Reader fo	r use with audio/video, information and communication

The equipment under test (EUT) is a Fingerprint Reader for use with audio/video, information and communication technology equipment. The plastic enclosure of EUT is secured by ultrasonic. And the AC Adapter has certification. Copy of Marking Plate:

Model Differences –N/A

Additional application considerations – (Considerations used to test a component or sub-assembly) – N/A

ENERGY SOURCE IDENTIFICATION AND CLASSIFICATION TABLE:

(Note 1: Identify the following six (6) energy source forms based on the origin of the energy.)

(Note 2: The identified classification e.g., ES2, TS1, should be with respect to its ability to cause pain or injury on the body or its ability to ignite a combustible material. Any energy source can be declared Class 3 as a worse case classification e.g. PS3, ES3.

Electrically-caused injury (Clause 5):

(Note: Identify type of source, list sub-assembly or circuit designation and corresponding energy source classification)

Source of electrical energy	Corresponding classification (ES)
All circuits except for output circuits	ES3
Output circuits (connector)	ES1
Electrically-caused fire (Clause 6):	
(Note: List sub-assembly or circuit designation and corresp	ponding energy source classification)
Example: Battery pack (maximum 85 watts):	PS2
Source of power or PIS	Corresponding classification (PS)
All circuits	PS2, Arching and Resistive PIS
Injury caused by hazardous substances (Clause 7)	
(Note: Specify hazardous chemicals, whether produces oze	one or other chemical construction not addressed as part of
the component evaluation.)	
Example: Liquid in filled component	Glycol
Source of hazardous substances	Corresponding chemical

N/A

Report No.: TH2403055-C02-R01

Page 3 of 36

Mechanically-caused injury (Clause 8)	
(Note: List moving part(s), fan, special installations, etc	c. & corresponding MS classification based on Table 35.)
Example: Wall mount unit	MS2
Source of kinetic/mechanical energy	Corresponding classification (MS)
Source of kinetic/mechanical energy	Corresponding classification (MS)
Sharp edges and corners	MS1
Equipment mass	MS1
Thermal burn injury (Clause 9)	8 1 2 .
(Note: Identify the surface or support, and correspondin	ng energy source classification based on type of part, location,
operating temperature and contact time in Table 38.)	
	TC1
Example: Hand-held scanner - thermoplastic enclosure	
Source of thermal energy	Corresponding classification (TS)
Enclosure (plastic)	TS1
X W X W	
Radiation (Clause 10)	
	and the corresponding energy source classification.)
(Note: List the types of radiation present in the product	and the corresponding energy source classification.) RS1
Radiation (Clause 10) (Note: List the types of radiation present in the product Example: DVD – Class 1 Laser Product Type of radiation	
(Note: List the types of radiation present in the product Example: DVD – Class 1 Laser Product	RS1

ENERGY SOURCE DIAGRAM

Indicate which energy sources are included in the energy source diagram. Insert diagram below -ES -PS -MS -TS -RS

	\sim				
4	Nr Nr	VA (V):	- VL-	1 de la companya de l	
	14	IA (A):		<u> </u>	~
					27

Supplementary Information:

"Max power after 3 s" is determined by adjustment of the variable resistive load to cause not more than 15 W of power dissipation for 3 seconds.

(*) "Max power after 5 s" is determined by adjustment of the variable resistive load to cause not more than 100 W of power dissipation.

If a separate voltmeter and ammeter are used, the product of (VA x IA) is used to determine PS Classification.

			C			
	6.2.3.1	Table:	Determination of Potentia	N/A		
Location		1	Open circuit	Measured r.m.s Calculated value		Arcing PIS?
			Voltage After 3 s (Vp)	Current (Irms)	(Vp x Irms)	Yes / No
	<u> </u>		× -×	<u> </u>	- 5	5

Supplementary information:

An Arcing PIS requires a minimum of 50 V (peak) a.c. or d.c. An Arcing PIS is established when the product of the open circuit voltage (Vp) and normal operating condition rms current (Irms) is greater than 15.

6.2.3.2 T	Table: Determination of Potential Ignition Sources (Resistive PIS)

	Single Fault)	s (W / VA)	/VA)	Yes / No						
				(Comment)						
- V	- 12 -	- 2		J 1	Resistive PIS					

Supplementary Information:

A combination of voltmeter, VA and ammeter IA may be used instead of a wattmeter.

If a separate voltmeter and ammeter are used, the product of (VA x IA) is used to determine Resistive PIS classification.

A Resistive PIS: (a) dissipates more than 15 W, measured after 30 s of normal operation, or (b) under single fault conditions has either a power exceeding 100 W measured immediately after the introduction of the fault if electronic circuits, regulators or PTC devices are used, or has an available power exceeding 15 W measured 30 s after introduction of the fault.
