POSSIBLE TEST CASE VERDICTS:

Test case does not apply to the test object: N/A(Not applicable)

Test item does not meet the requirement: F(Fail)

GENERAL PRODUCT INFORMATION:

Product Description –

- 1. IP-PBX which is intended to be used for audio/video, information and communication technology equipments.
- 2. The IP-PBX supplied by an ES1/PS1 DC power source during test.

Copy of Marking Plate:

See on the product.

ENERGY SOURCE IDENTIFICATION AND CLASSIFICATION TABLE:

(Note 1: Identify the following six (6) energy source forms based on the origin of the energy.)

(Note 2: The identified classification e.g., ES2, TS1, should be with respect to its ability to cause pain or injury on the body or its ability to ignite a combustible material. Any energy source can be declared Class 3 as a worse case classification e.g. PS3, ES3.

Electrically-caused injury (Clause 5):

(Note: Identify type of source, list sub-assembly or circuit designation and corresponding energy source classification)

Example: +5 V dc input

| Source of electrical energy | Corresponding classification (ES) | 1,50 | . 5 |
|-----------------------------|-----------------------------------|------|-----|
| Input | ES1 | 7 | K |
| All Internal circuits | ES1 | F | 7 |

Electrically-caused fire (Clause 6):

(Note: List sub-assembly or circuit designation and corresponding energy source classification)

Example: Battery pack (maximum 85 watts):

| Source of power or PIS | Corresponding classification (PS) |
|------------------------|-----------------------------------|
| Input | PS1 |
| All Internal circuits | PS1 |

Injury caused by hazardous substances (Clause 7)

(Note: Specify hazardous chemicals, whether produces ozone or other chemical construction not addressed as part of the component evaluation.)

Example: Liquid in filled component Glycol

| Source of hazardous substances | Corresponding chemical |
|--|------------------------|
| N/A (Built-in component, considered in end system) | N/A |

Mechanically-caused injury (Clause 8)

(Note: List moving part(s), fan, special installations, etc. & corresponding MS classification based on Table 35.)

Example: Wall mount unit

| Source of kinetic/mechanical energy | Corresponding classification (MS) |
|-------------------------------------|--|
| Plastic fan blades | N/A (Built-in component, considered in end system) |

Thermal burn injury (Clause 9)

(Note: Identify the surface or support, and corresponding energy source classification based on type of part, location, operating temperature and contact time in Table 38.)

Example: Hand-held scanner – thermoplastic enclosure

| Example: Hand held beamler | incrinopiastic cherosare | 161 |
|----------------------------|--------------------------|--|
| Source of thermal energy | | Corresponding classification (TS) |
| Accessible parts | 9 4 4 | N/A (Built-in component, considered in end system) |

Radiation (Clause 10)

(Note: List the types of radiation present in the product and the corresponding energy source classification.)

| Example: DVD – Class 1 Laser Product | KS1 |
|--------------------------------------|-----------------------------------|
| Type of radiation | Corresponding classification (RS) |
| N/A | N/A |

Supplementary information:

Note 1: Tma should be considered as directed by appliable requirement

Note 2: Tma is not included in assessment of Touch Temperatures (Clause 9)

1. With a specified maximum ambient temperature and test temperature of 45°C, the maximum permitted temperatures are calculated as follows: Winding components (providing safety isolation):

Class 130 (B) $Tmax = 120^{\circ}C - 10^{\circ}C = 110^{\circ}C$

2. During the test, the sealing compound did not soften or melt.

Supplementary Information:

Notes:[1] Supply voltage is the anticipated maximum Touch Voltage

- [2] Earthed neutral conductor [Voltage differences less than 1% or more]
- [3] Specify method used for measurement as described in IEC 60990 sub-clause 4.3
- [4] IEC60990, sub-clause 6.2.2.7, Fault 7 not applicable.
- [5] (*) IEC60990, sub-clause 6.2.2.2 is not applicable if switch or disconnect device (e.g., appliance coupler)

| 6.2.2 | Table: Electrical pov | ver sources (PS) me | easurements for classifica | tion | P 🚕 |
|--------|-------------------------|-----------------------|----------------------------|---------------------|----------------------|
| Source | Description | Measurement | Max Power after 3 s | Max Power after 5s* | PS Classification |
| A | Input / all internal | Power (W): VA (V): | - F | | Z. |
| | circuits | IA (A): | - ~ | - | PS1 |
| | 5 | IA (A): | \$ - | <u> </u> | , |

Supplementary Information: (*) Measurement taken only when limits at 3 seconds exceed PS1 limits

| 6.2.3.1 Table: | Determination of Potential Ignition Sources (Arcing PIS) | | | | | | |
|----------------|--|---------------|------------------|-------------|--|--|--|
| Location | Location Open circuit | | Calculated value | Arcing PIS? | | | |
| | Voltage After 3 s(Vp) | current(Irms) | (Vp x Irms) | Yes / No | | | |
| F | - 8 | ~ | | < | | | |

Supplementary information:

An Arcing PIS requires a minimum of 50 V (peak) a.c. or d.c. An Arcing PIS is established when the product of the open circuit voltage (Vp) and normal operating condition rms current (Irms) is greater than 15.

| | | 7- | | A V | | |
|---|----------------------------|--------------------------|---------------------|--------------------|---------------------|-----------|
| | 6.2.3.2 T | able: Determination of P | otential Ignition S | Sources (Resistive | PIS) | N/A |
| | Circuit Location Operating | | Measured | Measured | Protective Circuit, | Resistive |
| 2 | (x-y) | Condition | wattage or VA | wattage or VA | Regulator, or PTC | PIS? |
| b | | (Normal / Describe | During first 30 | After 30 s (W | Operated? | Yes/No |
| | | Single Fault) | s (W / VA) | /VA) | Yes / No | |
| | | | | | (Comment) | |
| | 1,5 | | _6 | | - 4 | 14 |

Supplementary Information:

A combination of voltmeter, VA and ammeter IA may be used instead of a wattmeter.

If a separate voltmeter and ammeter are used, the product of (VA x IA) is used to determine Resistive PIS classification.

A Resistive PIS: (a) dissipates more than 15 W, measured after 30 s of normal operation, or (b) under single fault conditions has either a power exceeding 100 W measured immediately after the introduction of the fault if electronic circuits, regulators or PTC devices are used, or has an available power exceeding 15 W measured 30 s after introduction of the fault.
